Dm500 Cifs Mount Failed!

I had successful connections from my main workstation PC (which uses Fedora 29 Workstation) to my mother's laptop (Windows 7 HP) network share few times using mount. cifs, but since not too long it CIFS share not getting mounted after reboot 'cifs mount failed w/return code = -2' Solution Verified - Updated 2018-11-22T02:03:49+00:00 - English.. Failing to mount automatically after reboot. No translations currently exist! CIFS not mounted properly after reboot on CIFS client.

cifs mount failed

cifs mount failed with return code 13, cifs mount failed with return code 2, cifs mount failed with return code 112, cifs mount failed with return code 95, cifs mount failed with return code 5, cifs mount failed with return code 115, cifs mount failed with return code 22, cifs mount failed, cifs mount failed with return code 113, cifs_mount failed w/return code

cifs mount failed with return code 2

cifs mount failed with return code 95
